SUMMARY

Software Engineer with **3+ years** of experience in backend development, REST API design, and distributed systems using **FastAPI, Django, and Python**. Built asynchronous data pipelines with **Celery**, deployed containerized microservices on **AWS ECS**, and managed L3 production support for high-availability telecom platforms. Pursuing M.Tech in Data Science, AI & ML; actively building GenAI applications with **LLMs and Transformer models**, and **exploring Golang** for building high-performance and concurrent systems.

EXPERIENCE

Software Engineer

Oct 2024 – Present

Mastercom Technologies (Client: Vodafone Idea via OpenText)

Bengaluru, India

- Owned end-to-end production deployment of **FastAPI** microservices on AWS with **Nginx** reverse proxy; configured SSL termination, rate limiting, and load balancing for a telecom analytics platform
- Led **L3 production support**: diagnosed critical live failures, maintained SLA compliance, and reduced MTTR via structured root-cause analysis and runbook documentation
- Managed **CI/CD** release pipelines using Git branching (feature → staging → prod) with code review gates and rollback procedures, ensuring zero-downtime deployments

Associate Product Engineer

Jul 2023 – Oct 2024

Credimatch

Bengaluru, India

- Architected **Celery**-based async pipelines for financial early warning signals — 3-stage flow: Fetch (MySQL, MongoDB, APIs) → Transform (Pandas, NumPy) → Persist (MongoDB) — ensuring data integrity at scale
- Containerized services with **Docker & Redis**; deployed on **AWS ECS** improving service isolation and horizontal scalability
- Delivered REST APIs consumed by analytics dashboards; collaborated cross-functionally with product and data science teams to iterate on signal definitions
- Mentored 3 engineering interns: conducted code reviews, onboarding, and sprint planning

Software Engineering Intern

Dec 2022 – Jun 2023

Credimatch

Bengaluru, India

- Built a **Django**-based maker-checker approval workflow with multi-role authorization; integrated **Google OAuth 2.0** into Django Admin and developed UI using Django templates
- Wrote unit tests ensuring code coverage and regression safety across approval flows

PROJECTS

AI Resume Builder for Veterans

Python, FastAPI, Hugging Face Transformers, T5

- Built an AI-powered resume optimization system using **TF-IDF** and **Logistic Regression** to evaluate and improve resume relevance against job descriptions
- Built **FastAPI** backend for veteran profile ingestion, T5 inference for skill translation, and dynamic **LaTeX**-based resume generation; integrated keyword optimization against job description embeddings

AI-Powered Content Delivery System

GCP, JavaScript APIs — Google MLH Hackathon

- Designed a system to deliver real-time personalized sports content using GCP and data-driven approaches
- Built RESTful APIs and integrated AI model outputs for dynamic content based on user interactions

TRACE – Technical Warranty Recommender

Machine Learning, Data Analytics

- Developed an ML-based recommendation system on historical claim data to assist warranty decision workflows; built automated pipelines reducing claim resolution time

TECHNICAL SKILLS

Languages: Python, Golang (Basics), JavaScript

Frameworks & Libraries: FastAPI, Django, Flask, Pandas, NumPy, Playwright, Selenium, Transformers (T5)

Cloud & DevOps: AWS (ECS, EC2, S3), Docker, Nginx, Uvicorn, Git, CI/CD, Linux

Databases: PostgreSQL, MySQL, MongoDB, Redis, Hadoop

Messaging & Async: Celery, RabbitMQ, Redis Queues

Concepts: REST APIs, Microservices, System Design, Data Pipelines, RBAC, Distributed Systems

AI/ML: LLM APIs, Prompt Engineering, Transformer Models, RAG, AI Application Development

EDUCATION

PES University

Jul 2024 – Jul 2026

M.Tech in Data Science, AI & Machine Learning (Weekend Program)

Bengaluru, India

Visvesvaraya Technological University (AIT)

Aug 2017 – Aug 2021

B.E. in Medical Electronics

Bengaluru, India
