

Gayathri Devi

Bangalore, India | +91 9036524348 | ms.gayathridevi6@gmail.com | LinkedIn | Portfolio

SUMMARY

Results-driven Software Engineer with over 3.4 years of experience in designing and building scalable, high-performance software applications. Proficient in modern programming languages including Python, FastAPI, and Django, with a strong focus on performance, scalability, and reliability. Experienced in collaborating with cross-functional teams to define, implement, and maintain innovative features, utilizing best practices in testing and debugging. Proven ability to leverage machine learning models and load balancers to optimize application performance.

EDUCATION

PES University , <i>M.Tech in Data Science, AI & ML (Weekend classroom)</i>	06/2024 - 07/2026
Cranes Varsity , <i>PG Diploma in IoT & Embedded Systems</i>	02/2021 - 01/2022
Visvesvaraya Technological University (AIT) , <i>B.E. in Medical Electronics</i>	06/2017 - 07/2021

WORK EXPERIENCE

Mastercom Technologies (Client: Vodafone Idea via OpenText) <i>Software Engineer</i>	Bangalore 10/2024 - Present
--	--------------------------------

- Designed and developed scalable backend services and REST APIs using FastAPI for a telecom analytics platform, enhancing data processing efficiency.
- Processed and analyzed large-scale telecom datasets with Hadoop, enabling data-driven operational insights to improve decision-making.
- Optimized PostgreSQL queries and indexing strategies, achieving a significant increase in query performance and system reliability.
- Led end-to-end development lifecycle including system design, implementation, testing, and deployment, ensuring timely delivery of features.
- Resolved critical production issues as L3 support, reducing downtime by 30% and improving system stability.
- Implemented secure authentication and authorization using Role-Based Access Control (RBAC), enhancing system security.
- Utilized Load Balancers to distribute application traffic effectively, increasing system resilience and uptime.
- Developed ML models to predict user behavior, providing insights that drove feature enhancements.

Credwatch <i>Associate Product Engineer</i>	Bangalore 07/2023 - 10/2024
---	--------------------------------

- Built scalable asynchronous processing pipelines using Celery and Redis for financial early warning systems, improving responsiveness by 25%.
- Designed and implemented ETL pipelines integrating MySQL, MongoDB, and external APIs for data ingestion, streamlining data workflows.
- Analyzed large datasets using Pandas and NumPy, generating actionable insights that drove strategic decisions for banking clients.
- Deployed containerized applications using Docker on AWS ECS, enhancing deployment efficiency and scalability by 40%.
- Mentored 3 interns, improving team productivity and onboarding efficiency, fostering a collaborative work environment.
- Collaborated with PwC and EY to conduct code reviews and security/compliance processes (SCP), ensuring high-quality, standards-compliant deliverables.

Credwatch <i>Software Engineer Intern</i>	Bangalore 12/2022 - 06/2023
---	--------------------------------

- Developed a Django-based maker-checker workflow system to streamline financial operations, increasing operational efficiency.
- Integrated Google OAuth authentication and implemented RBAC for secure access control, enhancing user security.
- Built responsive frontend interfaces using HTML and CSS within Django templates, improving user experience.

and engagement.

PROJECTS

AI Resume Builder with ATS Scoring

- Developed an AI-powered resume builder that optimizes resumes for ATS compatibility, enhancing job application success rates.
- Implemented machine learning algorithms to evaluate resume content and provide real-time feedback.

AI Personalized Content Delivery System

- Created a personalized content delivery system using machine learning models to tailor user experiences based on preferences.
- Leveraged data analytics to continuously improve content recommendations, increasing user engagement.

TRACE – Technical Warranty Recommender

- Built a warranty recommender system utilizing ML models to predict warranty needs based on historical data.
- Improved user satisfaction through targeted recommendations, reducing warranty claim processing time.

SKILLS

Python · FastAPI · Django · REST APIs · Microservices Architecture · Docker · AWS · PostgreSQL · MongoDB · MySQL · Redis · RabbitMQ · Data Structures · Algorithms · Distributed Systems · RBAC · Git · Bitbucket · Jira · Postman · Linux · Team Collaboration · Problem Solving · Typescript · Nodejs · GCP · Load Balancer · ML Models
